# client

```
graph TD; client[client] --> server1[server]; client --> server2[server]; client --> server3[server];
```

The diagram illustrates a client-server architecture. At the top, a large light blue rounded rectangle is labeled 'client'. Below it, three smaller purple rounded rectangles are arranged horizontally, each labeled 'server'. A black arrow points from the bottom of the 'client' box to the top of each 'server' box, indicating a one-to-many connection.
