# Server Development Workflow For PicCollage

#### Software We Need

- Ruby
- PostgreSQL
- Redis
- Memcache
- Git
- Terminal (iTerm 2)
- Text Editor (Sublime Text 2)

### Service We need

- Github
- Heroku
- NewRelic
- Mailgun

## **Setup Working Copy**

git clone git@github.com:collage.git

## Setup Database

```
cd pic-collage/
git checkout dev
rake db:create
rake db:schema:load
rake test
```

#### Work on Feature Branch

```
git checkout -b feature-branch
vim ...
vim ...
rake test
vim ...
rake test
git add -p
git commit
git push github feature-branch
```

## Send Pull Request

```
# go to Github and send a pull request
# wait for review and review others
# after everything is settle...
```

## Merge and Push

```
git checkout feature-branch
git merge dev
vim ... # fix conflict if any
git add .
git commit # resolve conflict
rake test # make sure again
git push github feature-branch
git checkout dev
git merge feature-branch # fast-forward
git push github dev
```

## Deployment

```
git checkout dev
git pull
git checkout master
git pull
git merge dev
rake test
git push github master
git push heroku master
```

#### **Utilities**

- ./bin/heroku-log
- ./bin/push-staging
- ./bin/migrate-staging
- ./bin/psql
